NETWORK. DISCOVER. BE INSPIRED.

# Using Roadrunner Rx Inventory Management Service to improve ERP systems

*Client case study*

Duncan Patrick & Jack Warchalowski

**montera.**

# Agenda

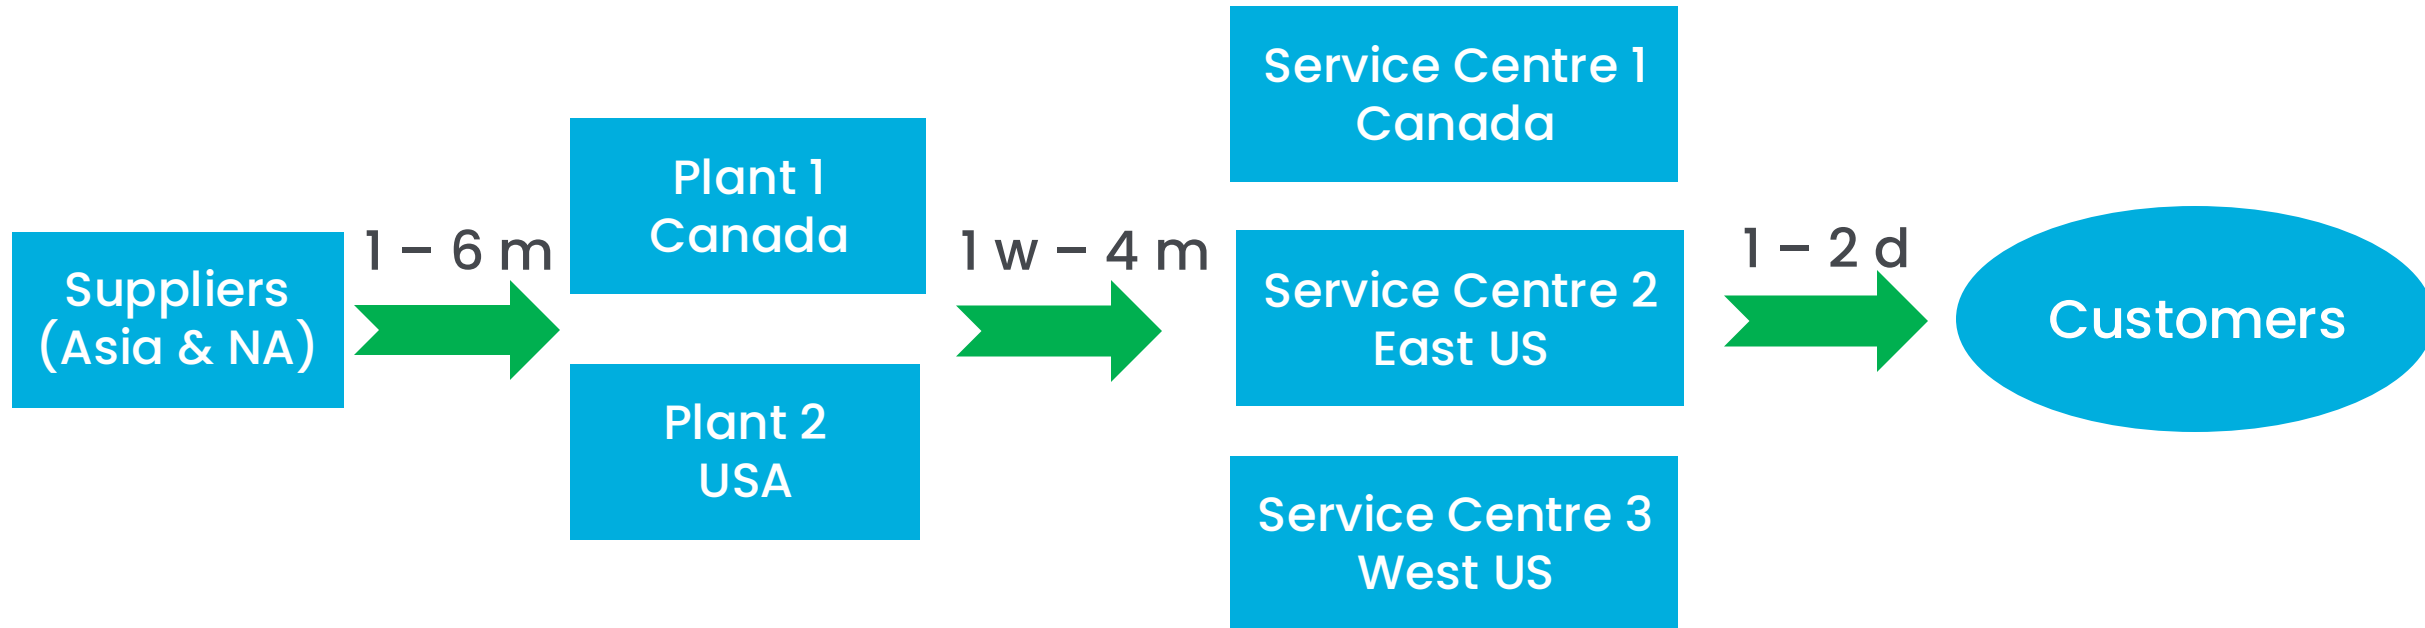

- Client overview
- Solution # 1
- Technology Investment Dilemma
- Solution # 2
- Roadrunner Rx Inventory Management Service
- Results
- Challenges
- Presenters' Bios

# Client Overview

- Manufacturer of heavy industrial products
- Servicing primarily oil & gas, energy, and chemical industries
- 2 manufacturing locations – Canada, USA
- Multiple service centres across North America
- Hundreds of SKUs, replacement parts and accessories – some common, some unique
- Very well established in the market with many experienced people
- Following traditional industry rules, lead times, relationships
- Focused more on manufacturing high quality products than optimizing inventory investment
- In the process of upgrading their company-wide ERP system

# Client Supply Chain

- Forecast / ERP driven
- Focused on customer service
- High inventory levels
- Low inventory turns

# Solution #1: New ERP (Replacement)

- Slow implementation at all manufacturing and service sites
- Significant resource requirements to support data accuracy – IT, supply chain, manufacturing, management
- User training and associated time commitment (overtime, stress and impact on customer service)
- Gradual realization that the new ERP system will not solve supply chain expertise and people availability problems
- Search for a different approach: potential for a TOC replenishment solution?

Which List  
of material  
requirements  
would you  
choose?

## Algorithm One (MRP / ERP)

1

$f(\text{Forecast.Safety}^{\text{intuition}})$

- ✓ Rely on accuracy and forecast
- ✓ Add safety stock as required
- ✓ Adjust with intuition

Assumption:  
We can be accurate

## Algorithm One (MRP)

1

$f(\text{Forecast.Safety intuition})$

- ✓ Rely on accuracy and forecast
- ✓ Add safety stock as required
- ✓ Adjust with intuition

**Assumption:**  
We can be accurate

## Algorithm Two (DDR)

2

$f(\text{consumption.Buffer feedback})$

- ✓ Establish stock buffer "wall"
- ✓ Absorb inaccuracy with buffer wall
- ✓ Replenish what's consumed
- ✓ Adjust with feedback loop

**Reality:**  
We can't be accurate

# Plan vs Reality

Outcomes	<i>f</i> (Forecast / ERP)	<i>f</i> Buffer / DDR)
Inventory	Too much / too little	Much less / high turns
Shortages / Stealing	Frequent	Infrequent
Scheduling	Inflexible	Flexible
Overtime / Expedites	High	Low
On time delivery	Low	High

# Solution #2: TOC Replenishment

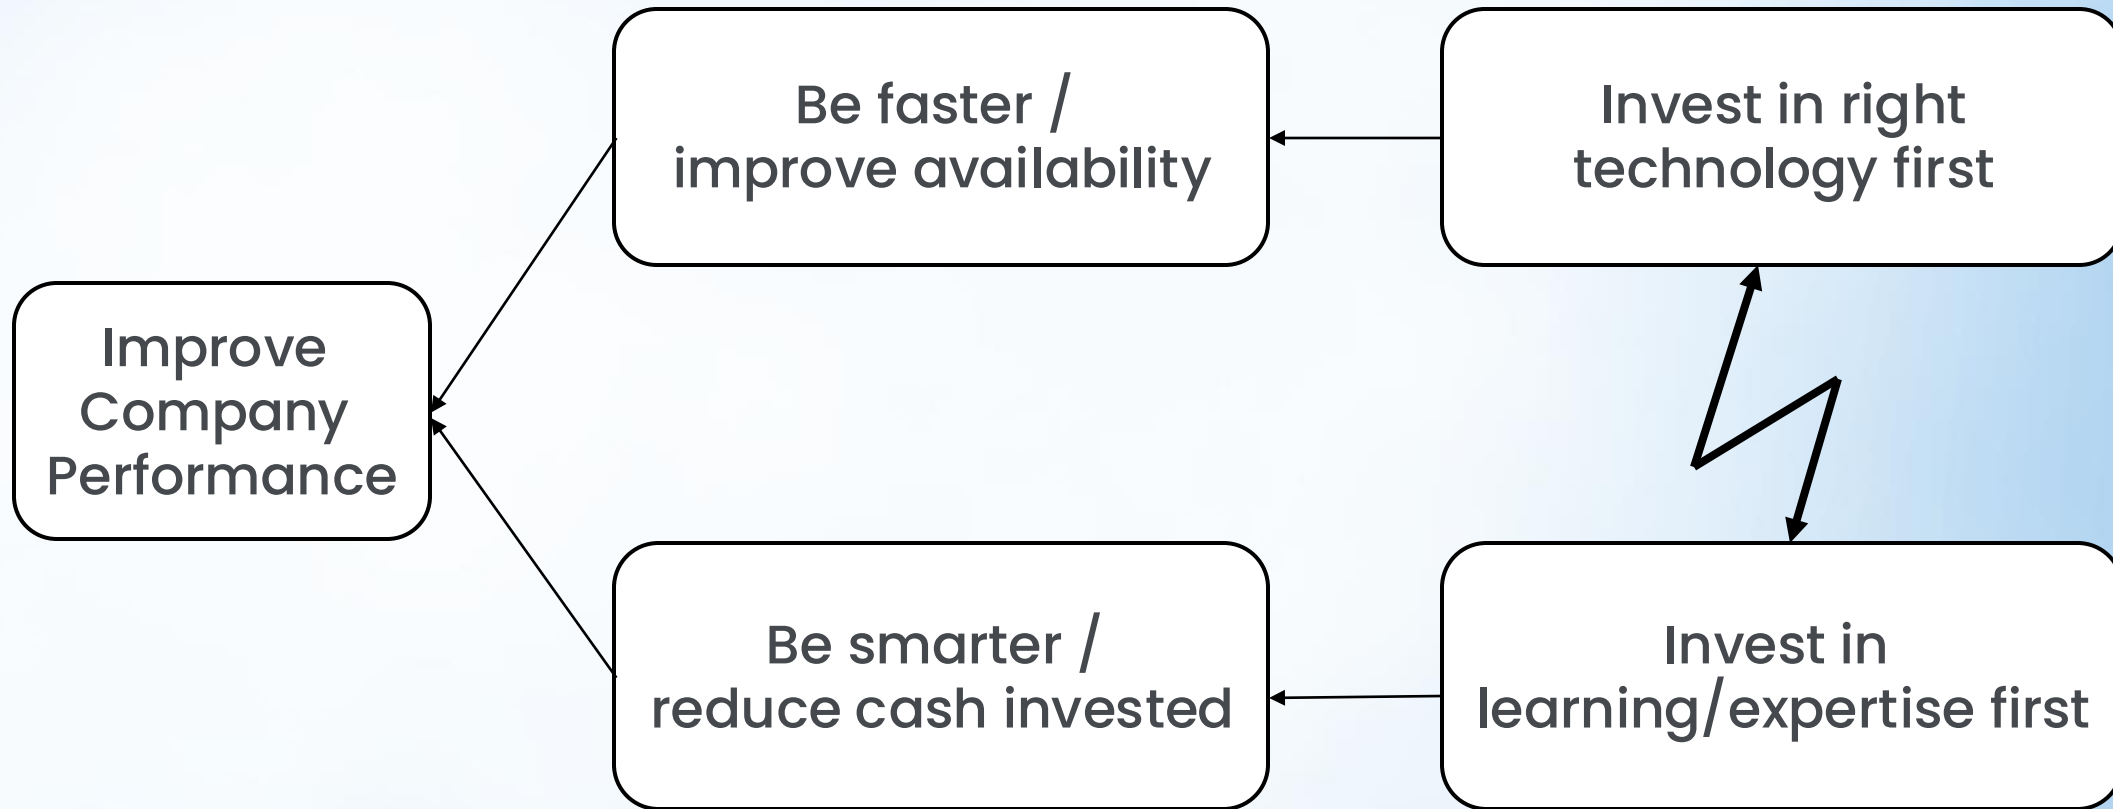

## Critical Questions:

- How to quickly acquire TOC replenishment knowledge?
- How to enable the new ERP system to support it?
- How to build a multi-functional, international team of IT, TOC and inventory management experts for company-wide implementation?
- How much time do we have to successfully pilot and roll out across our organization?

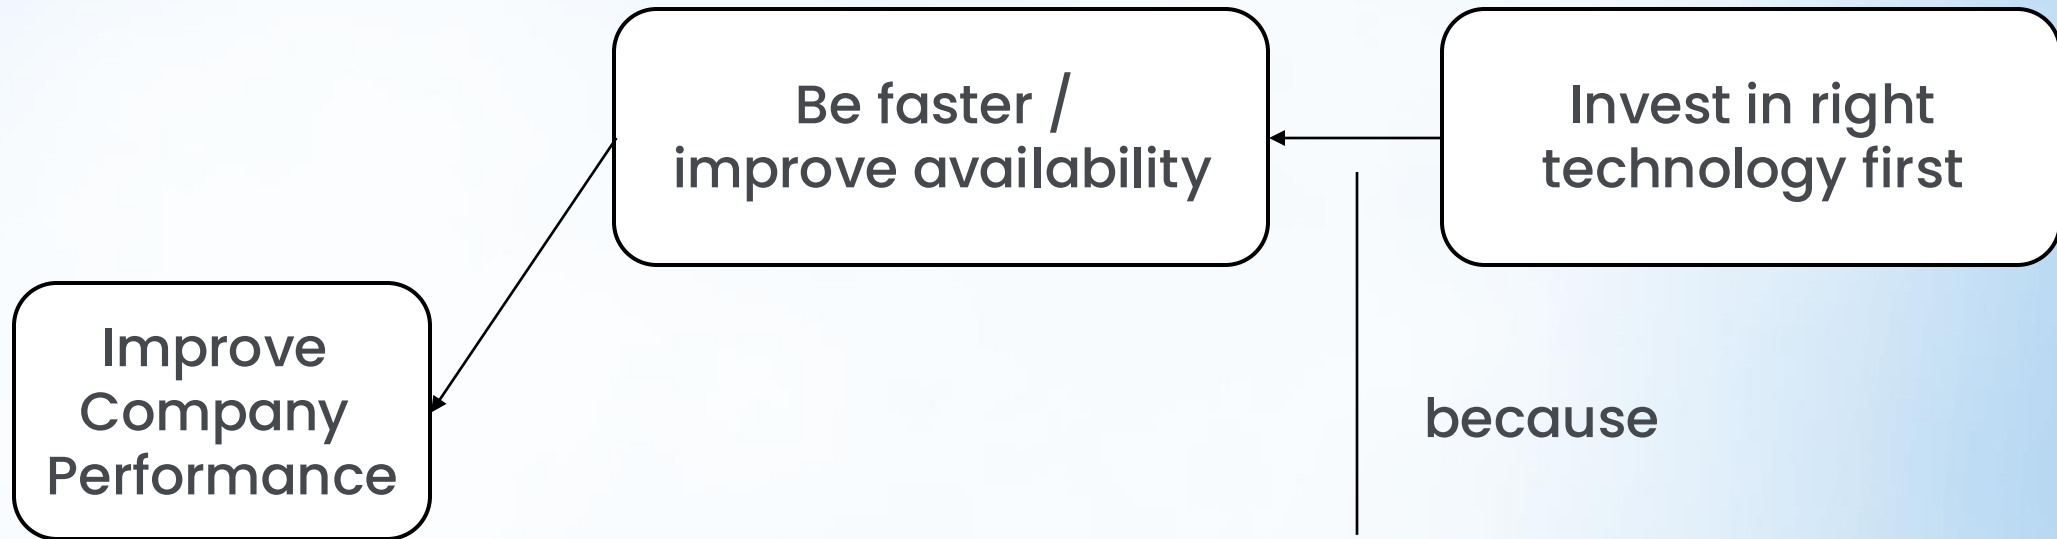

(Typical signs of Technology Investment Dilemma...)

# Technology Investment Dilemma (Inventory Management)

# Technology Investment Dilemma

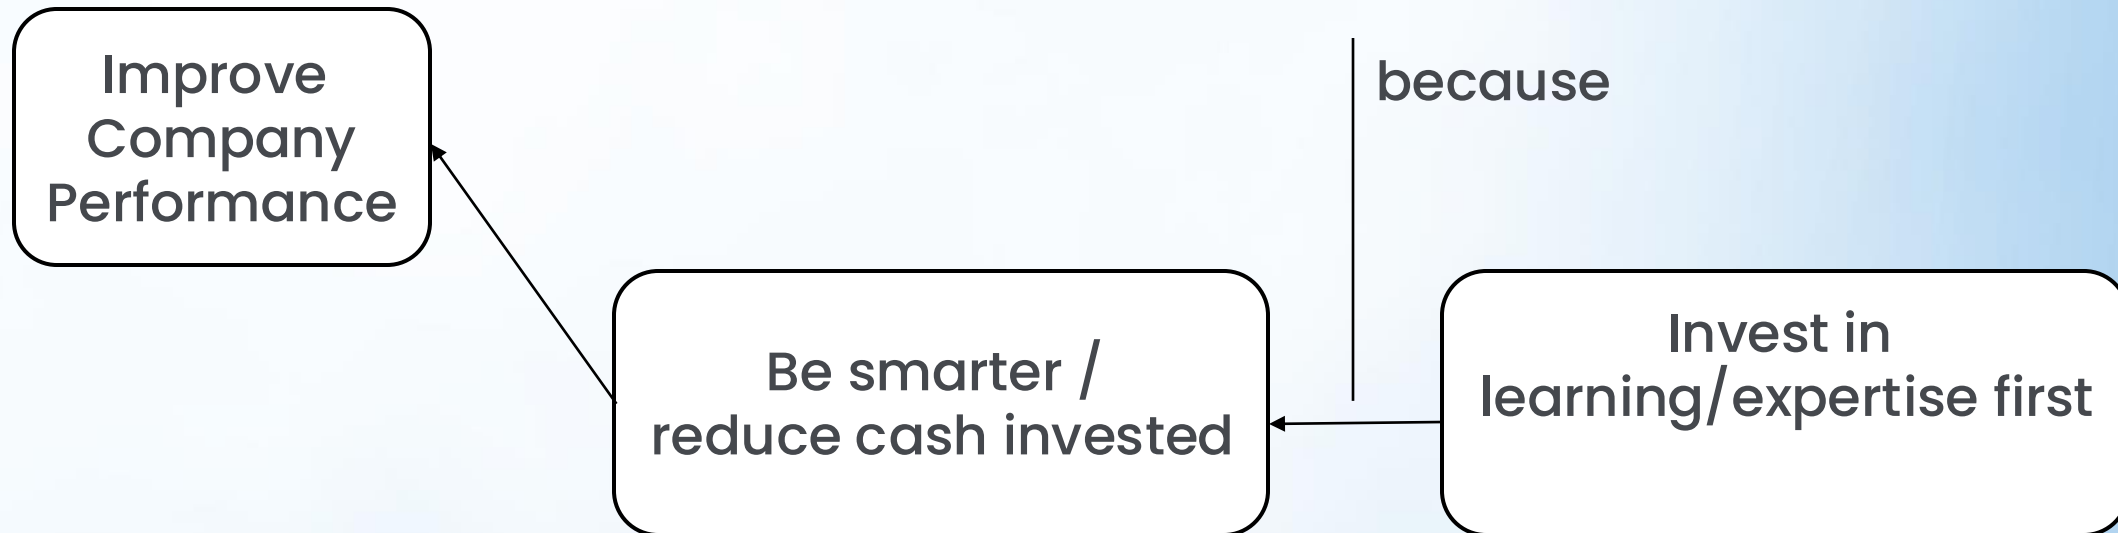

because

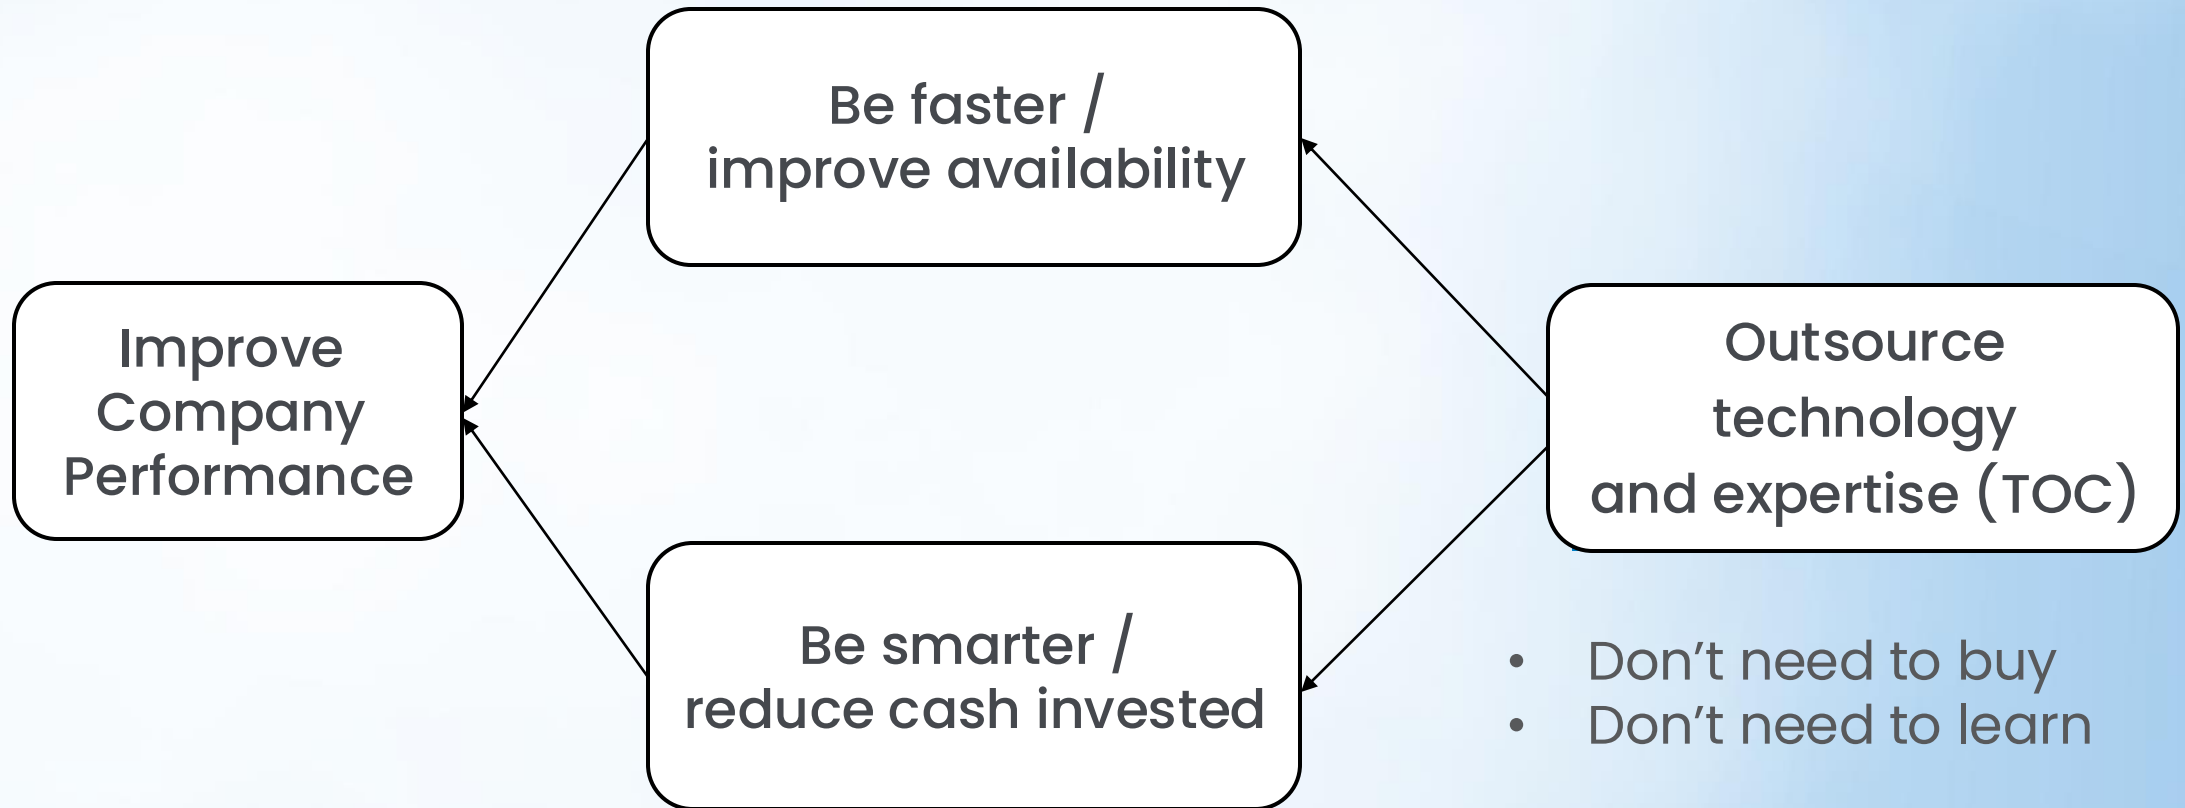

- Implementing right technology brings results faster
- We need to “own” and use technology (ERP) ourselves

# Technology Investment Dilemma

- Learning brings significant, sustainable results
- It takes a long time to internalize methodology (i.e., TOC)
- You need to know methodology to implement it correctly
- Companies need internal experts

# Technology Investment Dilemma

# Roadrunner Rx Inventory Management Service

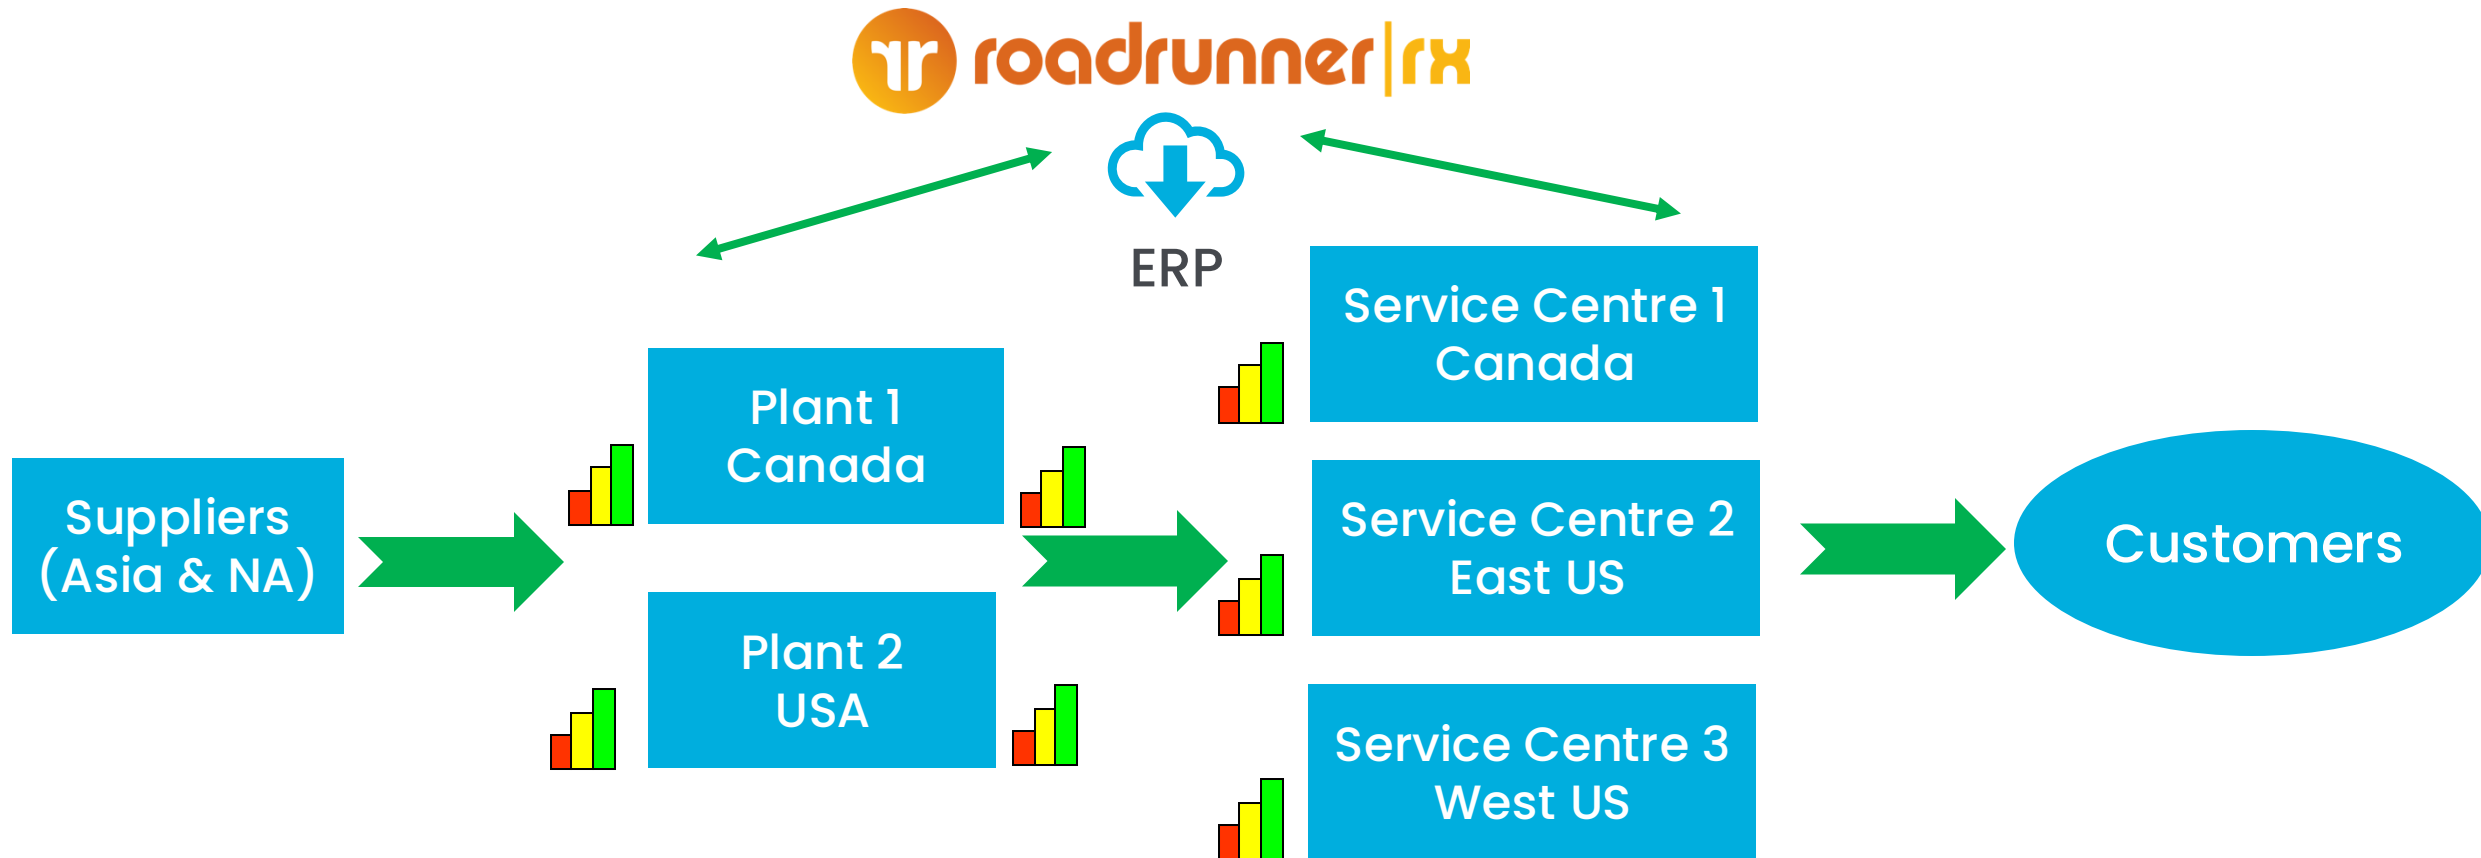

Rationale:

- Transition from ERP / forecast-driven to TOC Replenishment principles
- Utilize proven technology to augment new / old ERP system
- Partner with an organization that can provide both

Together, develop a plan to improve inventory management process company-wide

# Roadrunner Rx IMS

- Generate daily Purchase Order requirements
- Create an on-going Expedite List
- Identify excess / obsolete inventory
- Create Inventory Management Scorecard with Key Performance Indicators (KPIs)

# Roadrunner Rx IMS Implementation

Established Roadrunner Rx IMS implementation team (Montera & Client)

Designed Demand Driven Replenishment vision for the entire business

Selected one Service Centre location to prove the concept

Defined Roadrunner Rx IMS process guidelines

Implemented cloud-based, Roadrunner Rx technology

Agreed on data flow and inventory management process rules

# Roadrunner Rx IMS Implementation

- ✓ Determine Target Supply Level (TSL) for every SKU
- ✓ Replenish based on consumption and MOQ
- ✓ Monitor inventory level according to zone
- ✓ Decrease TSL when consistently green
- ✓ Increase TSL when consistently red

# Roadrunner Rx IMS Implementation

## New Behaviors

No more forecasts  
(excluding new products)

SKU level management

Follow buffer signal  
(trust the system)

Dynamic Feedback Loop

# About Roadrunner Rx IMS

## Subscription includes:

- Manage Component / Raw Materials Buffer Inventories
    - *Design and re-size levels, locations & optimize turns*
    - *Help with New Products replenishment introductions*
  - Communicate Daily Order Requirements - "What to Buy"
  - Monitor Supply Chain Pipeline Status (ensure right supply)
  - Design and maintain Inventory Performance Scorecard
  - Evaluate Vendors and Purchasing Team's Performance
  - Generate slow and non-moving inventory reports
  - Create Purchase Order Expedite List
- 
- *ERP agnostic, No CAPEX, no extensive training or long software implementations*
  - *Pay by the month, no entry fee, no exit fee*

# About Roadrunner Rx IMS

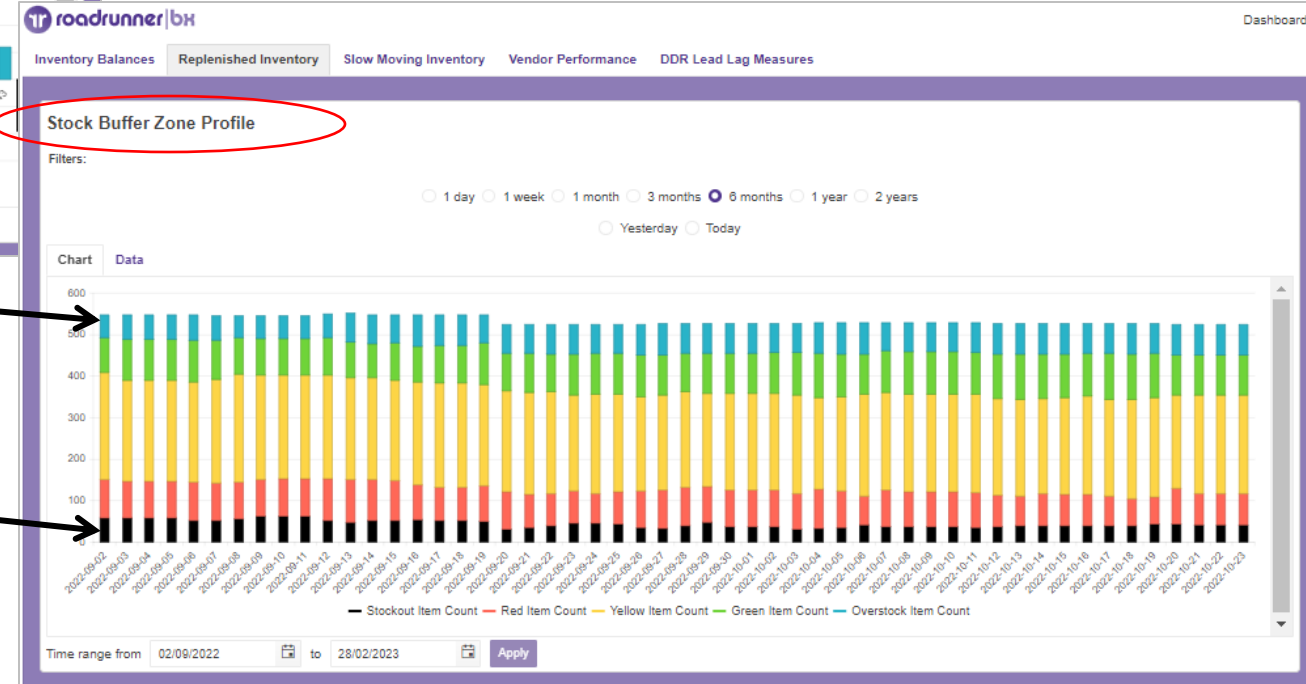

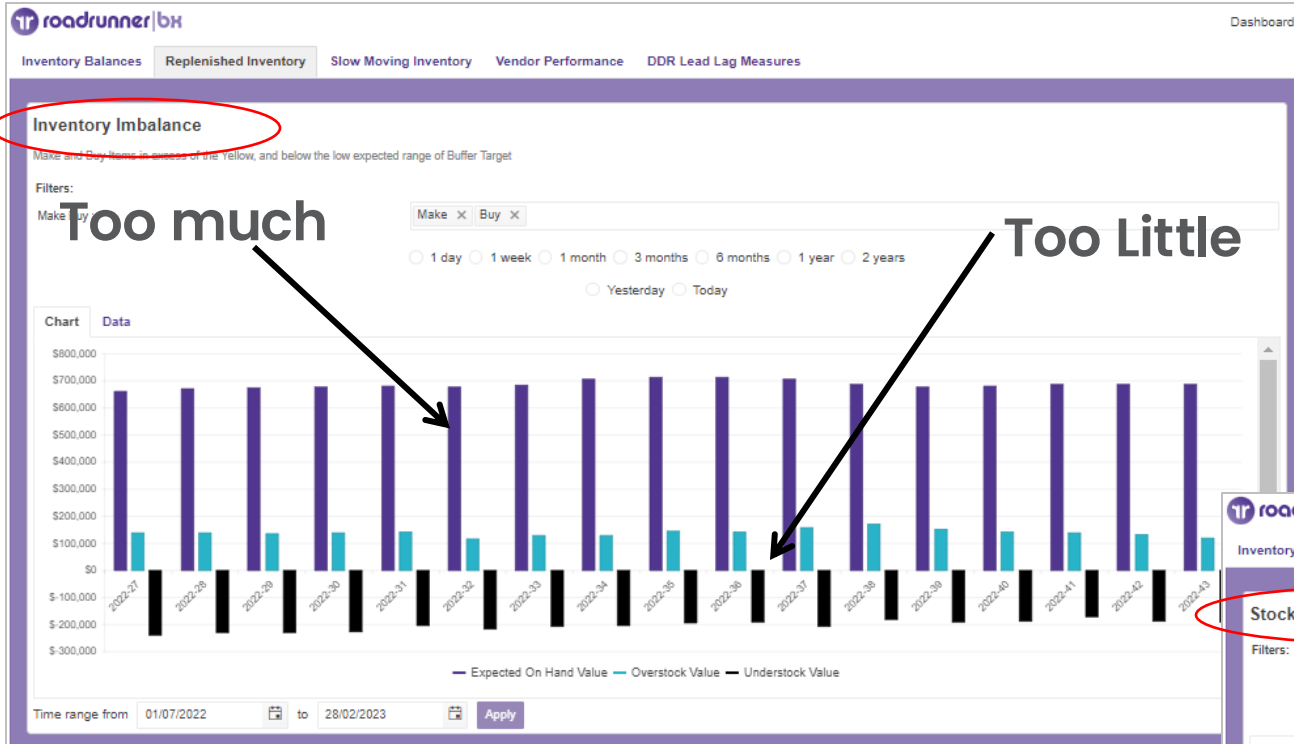

## Ongoing process support:

- Review data ingestion for its accuracy and implications
- Ensure integration stability
- Recommend what items should be stocked vs. purchased to order
- Perform initial buffer sizing for all stocked items
- Generate What to Buy suggestions and their implications for product availability and inventory levels
  - “Insurance” products, critical parts, etc.
- Prepare scorecard (notes, etc.) for weekly team meetings
- Prepare agenda and action items of weekly team meetings
- Review progress of inventory reduction actions
- Ensure the action items are complete and buy suggestions are being followed

# Inventory Scorecard

What is the implication of this profile for:

- \$ investment & cash flow
- Customer delivery / responsiveness / lead time

Over Stock

Stock Out

Chart Data

From 2024-07-09 To 2024-08-06 Time Range Apply And Or Add Filter Add Group X

# Challenges

- Overstock is usually large & clients don't always know how to quickly reduce it
- Inventory Imbalance (too much / too little) is also significant
  - This means that buying stockout items may increase inventory in the short term
  - Reducing overstock needs to be done asap to keep cash flow under control
- Need to establish regular team meetings:
  - Teach scorecard design and KPIs
  - Constantly verify data requirements of inventory buffer design algorithm (supplier lead times, order lead time, minimum order quantities, etc.)
- Ensure data integrity and ERP integration stability - to make sure we always deal with right data set
- Patience - needs a bit of handholding and understanding at the beginning
- Change Management still critical
  - Buy-in and support of the client team
  - Trust in the new process

# What's new in 2024?

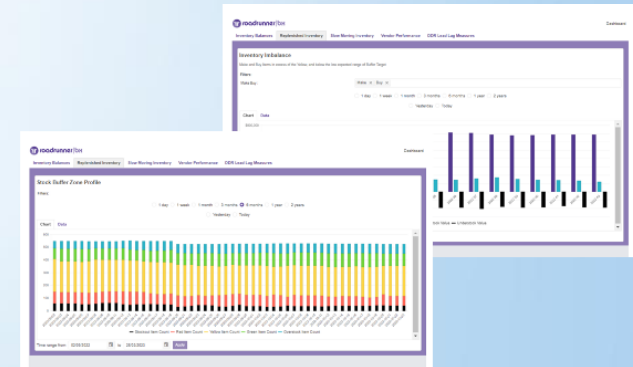

- ✓ Roadrunner Rx algorithm **sits next to the ERP**, replacing all the conventional MRP functionality
- ✓ Users act on purchase suggestions by interacting only with their ERP
- ✓ Cloud-based Inventory Management Scorecard provides process monitoring and feedback
- ✓ Focus on purchased parts

## Works with all popular ERPs

## Rx IMS Scorecard

# Presenter bios

**Jack Warchalowski**, President and CEO of Montera (jack@monterainc.com)

- Prior to Montera, Jack was the head of operations for the High-Tech manufacturer, Ernst & Young management consultant, and a project engineer with Babcock & Wilcox
- Jack is a Certified Management Consultant and a Professional Engineer
- Jack holds an MBA degree from the Wilfrid Laurier University and a Bachelor of Applied Science in Mechanical Engineering from the University of Waterloo.
- Jack is certified by the TOCICO as an implementer in all aspects of TOC

**Duncan Patrick**, Executive VP of Montera (duncan@monterainc.com)

- Prior to Montera, Duncan was a member of the senior leadership team of an industrial distributor, consulting manager at Ernst & Young, and Landman with Husky Oil
- Duncan is a Certified Management Consultant registered in Ontario
- Duncan holds an MBA degree from the Richard Ivey School of Business, Western University, and a Bachelor of Commerce degree (with distinction) from The University of Calgary
- Duncan is certified by the TOCICO as an implementer in all aspects of TOC

## Montera

Montera is a global software and consulting company helping manufacturers solve persistent operations and supply chain problems. We apply our world-leading expertise in Theory of Constraints (TOC) and Lean Thinking to significantly improve lead times, inventory levels, capacity, forecasting, on-time delivery and other KPIs.
